Update Weather34 Template

Having selected latest update file click here

Weather34 Backup

Backup File Path (optional):

Used for creating Back Up if you need to preserve history data

Please leave empty current directory will be used and back up will be created in this directory

Back Up Weather34 Template

Status: Weather34 Standalone update files found, ready to use for Update

Processing Time: 0.00080084800720215 seconds

Step 5 Check !

5.* If update failed check file permissions/ folder permissions some hosts set these automatically for files uploaded but basically that is all there is todo to run the updater.

Step 6

6.* Check dashboard for succesful update * caution if file permission is applied this message may not be 100% true as possibly it may have created a new folder and unzipped files into a folder named exactly as zip file example folder may appear called "/Aurora-MKII-simple-update-13-10-2021.zip" .So please check your server if update did not update template.

Status: Weather34 Updated successfully

Processing Time: 0.04601911720219 seconds

Thats It !

Weather34 Aurora MKII should be all upto date and you can also perform a one click essential safe keeping backup via the same screen.

Weather34 Backup
